5/6 pope spools

Machine can work with pope winder or bypass the pope and cut directly sheets on a Pizzolato sheet cutter

Duplex, 6 slitters

Machine was stopped in 2014

The stock preparation is not included

The PM was built in 1962 and completely renovated in 1992, when the side parts of the wet section were replaced and Valmet totally rebuilt the hood of the dryer section and also 6 dryer cylinders were added. It worked until the end of 2014 when its production was shut down .

One of the best quality of this machine is that it can be operated just by a direct current 145 kwh electric motor, In reference to the forming section, the dryer section and the sheet cutter as well. It conveys the idea of how much energy can be saved with its production.
